

Dolina Timothy

A High Yielding and Persistent Hay Type

DOLINA provides a very good disease resistance, which is the basis for a good healthy crop.

Together with the very high DM yield as well as with the early and massive spring growth, this variety is an ideal partner for high yielding mixtures - mainly for conservation. But due to the improved persistency and high yields in the fall, Dolina can also be used for late grazing in the season.

The very high yields of Dolina is based on the aggressive growth, which helps in competition with other aggressive growing grasses in the mixture.

Grazing Tolerance—6/9

At A Glance:

- ◇ Top DM yield
- ◇ Very good disease resistance
- ◇ Especially against leaf spot
- ◇ Improved persistence

Seeding rate: 10-15 lbs/A
