

Arsenal

Meadow Brome

Arsenal was selected for plant vigor, seedling emergence from a deep planting depth, forage and seed yield under dryland environments in Utah and moves into the King's Agriseeds region as well.

Arsenal had greater seedling establishment and persistence over years than other varieties. Forage yield, protein and digestibility exceeds that of many other varieties of meadow brome. Arsenal provides livestock producers with high yielding nutritious forage that is winter hardy and drought tolerant. Arsenal can be used for both grazing and hay.

Meadow brome grows well from spring to fall but if used for dry hay, the first cutting is very early. Hay is usually ready before most early orchard grasses.

 **BARENBRUG**

At A Glance:

Key Features:

- ◇ Good establishment and growth in droughty conditions
- ◇ High Yield
- ◇ Very Early Maturity
- ◇ Exceptional Winter Hardiness

Establishment:

Use the large box of the drill

Seeding rate: 35-45lbs/Acre

Depth: 1/4-1/2 inch
