

TerraLife®-BetaMaxx

Crucifer-free cover crop mixture with high nitrogen fixation potential

BetaMaxx is a balanced blend carefully selected for rape, beet and vegetable cultivation. Common vetch has a beneficial effect on soil bacteria, which protects plants from pathogens. **BetaMaxx** enables the subsequent main crop to be grown the following year without plowing. This improves sowing accuracy and supports biological activity. Early indications are that this mix can significantly increase sugar beet yields compared with using oil radish as a cover crop. **BetaMaxx** can also be used in combined rape and beet rotations because no cruciferous plants are included.

Note: In soils without a pea or vetch history, a pea vetch inoculant is recommended. The clovers in this mix are preinoculated.

Mixture characteristics:

Preservation of nutrients	++
Nitrogen fixation	+++
Penetration of compacted soils	++
Suitable for late sowing	++
Suitable for cold sites	+++
Suitable for warm, dry sites	++

- ✓ Freezes off reliably
- ✓ Creates ideal seed bed conditions
- ✓ Suitable for rape cultivation

Growing instructions:

Crop rotations:

Corn, cereals, beets, vegetables, legumes

Sowing rate:

35 – 40 lbs/ac

Planting date:

Similar to alfalfa late summer guidelines of your area

Seeding depth:

1/2" to max. 1"

Included species:

Phacelia, berseem clover, linseed, black oat, common vetch, field pea
