

SabrEX[®]

ROOT INOCULANT

for CORN

In-Furrow Formulation

SabrEX for CORN brings the benefits of ABM's[®] IGET[™] Technology package to your corn crop. It has been tested across the Midwest under a variety of field and fertility conditions. It has proven to increase yields an average of **8.5 bu/a**.

Available in three formulations:

PB is a low volume, talc/graphite based planter box treatment. In-Furrow is a liquid applied at planting.

SabrEX for CORN has been shown to:

- Create more robust root systems
- Increase water and nutrient efficiency
- Increase yields on field corn, popcorn, sweet corn and sunflowers
- Induce resistance to plant stresses like dry weather
