

Organic Hayboss

A well-balanced, alfalfa-grass mixture. The grasses in this mixture are not only very digestible, but also reduce potato leaf hopper pressure and help keep weeds from invading the stand. Makes a nice dry hay to feed on the farm or to sell on the hay market.

Soil Adaptation:

Best on soils that are good for alfalfa.

Wet- Not desirable. Alfalfa does not tolerate wet soils well.

Drought- Excellent for alfalfa. Very good for tall fescue and festulolium.

pH range—Alfalfa prefers soils that are 6.5 and higher.

Cutting Management:

Cut leaving a 3-4 inch stubble height when alfalfa is in early bud to early flower.

Stand Life:

With good management and proper soils, alfalfa should last a minimum of 3 years. Consistent early harvest of alfalfa will shorten alfalfa stand life. For longer alfalfa stand life, delay fall harvest to full flower.

Traffic Tolerance:

Fair. Grasses are more tolerant than the other alfalfa.

At A Glance:

Product Formula

70% Alfalfa

10% Red Clover

12% Fojtan

8% Orchardgrass

Uses:

Dry Hay: Excellent

Haylage/Balage: Excellent

Managed Intensive Grazing: Very Good

Continuous Grazing: Poor

Establishment:

Use the large seedbox of the drill

Seeding Rate: 25lbs/Acre

Seeding Depth: Shallow -No Deeper than 1/4"

Speed: Alfalfa will emerge quickly.

Orchardgrass and Timothy will start a little slow but will be very productive in years 2 and higher.
