

All About Alfalfa.

Featured Alfalfa Proven to Perform.

KingFisher 435HD—High Digestibility. Next generation high ly digestible alfalfa, that was bred for quality. It has an excellent agronomic package that provides a very persistent and healthy plant for top production over a broad range of soils. This variety is noted for its low lignin!

KingFisher Stronghold 35-2— Resilient. Stronghold brings a great defense to our alfalfa lineup. It features a sunken crown for great traffic tolerance, branch roots keep it firmly in the ground and keeps more roots above the water table.

KingFisher PLH 422— Potato Leaf Hopper. A new, high performing Potato Leaf Hopper variety of alfalfa. This variety features multifoliate leaf structures for a high leaf to stem ratio.

KingFisher 519— Multi-Foliate. A blend of 2 high yielding, fall dormancy 5 alfalfas. Blended alfalfas have been proven to boost productivity and increase stand health. 519 features a high leaf to stem ratio which means higher feed value for your livestock. Both alfalfas feature multifoliate leaf structures.

Upon harvest, pair with....

MAGNIVA® for Hay Inoculant

A dry hay inoculant that minimizes wear on your equipment. It contains a natural, scientifically selected elite lactic acid bacterium formulated with enzymes that work together to colonize dry hay, enhance the feed quality and help prevent the growth of yeast and molds, minimizing spoilage losses due to variations in field conditions (soil moisture, ambient humidity, windrow size, etc.).
