BMR Sorghum-Sudangrass

The Brown Midrib gives more value to this later maturing hybrid. The late maturity concept produces hybrids that are 20-30 days later than conventional sorghum-sudangrass hybrids. This late maturity allows a wider window for harvest of high quality leaves before boot stage is reached. This later maturing BMR hybrid produces greater digestibility values and a higher crude protein. Digestibility of this BMR hybrid was 20+% more than a commercial white mid-rib check in trials. This hybrid has a wide range of adaptation because of its excellent drought resistance and yield of quality forage for direct pasture for wet hay.

At A Glance:

- ◇ Brown Midrib
- ◇ Late-Maturity sorghum sudangrass
- ◇ High Palatability
- ◇ Multi-purpose forage
- ◇ Wider harvest window
- ◇ Higher protein and digestibility than conventional sorghum-sudangrass hybrids
- ◇ High green leaf retention
- ◇ Excellent drought resistance
- ◇ Excellent tillering, regrowth, and recovery.

Uses:

Baleage, Haylage, Rotational Grazing

Establishment:

Seeding Rate: 40-50lb/Acre

Seeding Depth: 3/4" to 1 1/2"

Seeding Dates: After soils are 60 degrees and rising. Seed into moist soils.
