

KF SynergyX Fortress Synergyx Alfalfa Blend

King Fisher SynergyX Fortress is a rugged, traffic tolerant blend of alfalfas put together with persistence and resilience in mind. This mix contains two sunken crown varieties and various root structures that brings great traffic tolerance. Along with the sunken crown, branch roots keep the plant firmly in the ground during freezing and thawing to help avoid heaving and winterkill. Creeping root and adaptable root alfalfas round out the mix.

The strength of our KingFisher SynergyX alfalfa blends is the power of synergy— mutual advantageous combined action. Instead of competing, the premium varieties in the SynergyX blends work together with their strengths to produce yield and longevity above what each individual variety could do by itself. They work together to fill out low, middle and top canopy for a very dense stand. Their varying root systems feed the plants whether it's warm or cool, wet or dry.

Most fields have a variety of high and low spots as well as soil types. A single alfalfa variety may yield well in one spot and not so well in another spot. But our KingFisher SynergyX alfalfas blend the strengths of several alfalfa varieties to increase the total field tonnage by bringing consistent yield to every square foot in the field.

At A Glance:

Agronomic Traits:

Disease Resistance	35/35
Dormancy	4.3
Winter Survival	1.8
Forage Quality	Excellent
Leaf to Stem	Excellent
Persistence	Excellent
Yield	Excellent

Establishment:

Seeding rate: 18-22 lbs/A

Seeding Depth: Surface to 1/4" on a firm seed bed.

-Seed in early spring or late Summer.

Management:

Take a soil test: calcium, potassium, phosphorus, sulfur, boron and other nutrients are needed in the right amount for high yields.
