

# KF SynergyX Ignite Alfalfa Blend

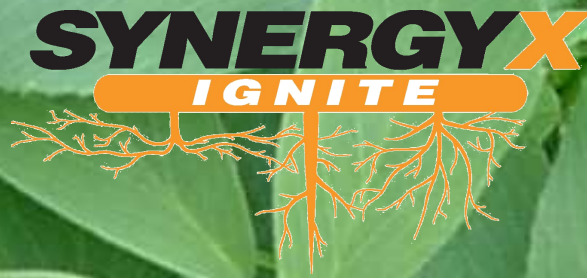

King Fisher SynergyX Ignite is an intelligent blend of 4 unique alfalfas designed for the aggressive farmer who wants to maximize yield and quality.

Ignite brings these benefit to you:

- Excellent yields and quality
- Reduced crosslinking with lignin for increased digestibility
- Very high disease resistance

The strength of our KingFisher SynergyX alfalfa blends is the power of synergy — mutually advantageous combined action. Instead of competing, the premium varieties in the SynergyX blends work together with their strengths to produce yield and longevity above what each individual variety could do by itself. They work together to fill out low, middle, and top canopy for a very dense stand. Their varying root systems feed the plants whether it's warm or cool, wet or dry.

Most fields have a variety of high and low spots as well as soil types. A single alfalfa variety may yield well in one spot of the field and not so well in another spot. But our KingFisher SynergyX alfalfas blend the strengths of several alfalfa varieties to increase the total field tonnage by bringing consistent yield to every square foot of the field.

## At A Glance:

### Agronomic Traits:

|                    |           |
|--------------------|-----------|
| Disease Resistance | 35/35     |
| Dormancy           | 4.2       |
| Winter Survival    | 1.8       |
| Forage Quality     | Excellent |
| Leaf to Stem       | Excellent |
| Persistence        | Excellent |
| Yield              | Excellent |

### Establishment:

Seeding rate: 18-22 lbs/A

Seeding Depth: Surface to 1/4" on a firm seed bed.

-Seed in early spring or late Summer.

### Management:

Take a soil test: calcium, potassium, phosphorus, sulfur, boron and other nutrients are needed in the right amount for high yields.
