

Exceed® Peat Inoculant

Peat inoculant is intended to be applied on the seed. It contains a culture of highly effective, specific strain of rhizobia bacteria that forms a symbiotic relationship with the legume plant, benefiting both the bacteria and the legume. The plant provides the bacteria a place to live and multiply and in return the bacteria convert atmospheric nitrogen into a usable form for the plant.

Ease of Use

Exceed® Peat will work with most types of planting equipment.

Effective Concentration

Exceed® Peat maintains an industry leading rhizobia count to ensure successful nodulation.

Low Application Rate

As low as 2.5 oz per 50 lb of seed (see label for details.)

For soils that have never been host to the legume being planted, apply Exceed® Peat at a 1.5-2.0x rate or use Exceed® Peat with a liquid inoculant product from Visjon Biologics.

Familiar Packaging

Available in a variety of treat sizes to fit your growing needs.

Available for the following crops:

- | | |
|---|--------------------------------------|
| Alfalfa/True Clover Combination | Lupine |
| Arrowleaf Clover | Pea/Vetch/Lentil |
| Bird's Foot Trefoil | Peanut/Cowpea/
Lespedeza/Mungbean |
| Cover Crop Blend
